

## Report from Special Audit Student

Nationality: Greek

Department: Computer Science and Engineering

Period: April 2019 – September 2019

|   |
|---|
| What motivated you to study at TUT?   |
| The main reason for applying at TUT for an exchange program was the research conducted at the university. My main goal during my 6-month exchange program was to understand better topics that interested me and if possible, interact with Japanese students, researchers, professors and people from the industry about the state-of-the-art technologies available in Japan and the world generally.   |
| What kind of studies and research did you do at TUT? How much progress?   |
| My program in TUT included subjects and not research. As my master implies, I was mostly interested and followed subjects regarding computer science, but this didn't limit me as I also took part in subjects from other departments. The progress in these classes was satisfying but I would have loved to have a more in-depth discussion about state-of-the-art technologies and their industry implementation rather than focusing on basic principles.                 |
| Fun memories at TUT   |
| The fun memories from TUT during my stay are countless. I was lucky enough to get acquainted with wonderful and very friendly students and staff which became my friends. I regard myself as lucky, also because of the laboratory I was appointed to. The laboratory gave me a lot. I was able to become part of it very easily and made friends with each of the students. The Professor was also exceptionally friendly and helped me with every problem I had encountered |
| Message to future visiting students   |
| My message to the new visiting students is to enjoy their visit in Toyohashi and try to communicate and make friends with local students. Take part in club activities as its very easy to talk with other students. I can highly recommend the swimming club.  |
