

Report from Special Research Student

Nationality: Mexico

Department: Mechanical Engineering

Period: July 2019 – December 2019

What motivated you to study at TUT?

TUT is recognized as a high impact university in the area of engineering, international research and more importantly a favorable environment for foreign students.

What kind of studies and research did you do at TUT? How much progress?

The area of my research is in the field of mechanical engineering, in materials science, using a recent technique called "severe plastic deformation" to process Mg. So far as the objectives set for research have been met ~25% (first year of 4).

Fun memories at TUT

Being in the international building "Kaikan" gave me the opportunity to meet many international students from different parts of the world, for Christmas we organized a Christmas dinner we were Mexican, Japanese, Chinese, Mongolian, Tanzania and Myanma we had an exchange of gifts, we played cards and more it was an incredible experience.

Message to future visiting students

Coming to a university in another country can be scary and challenging, however it can change your thinking and help you improve academically as well as personally.

Enjoy, travel, dare to know new cultures and experiences because at the end of your stay you will never be the same.
