

Report from Special Research Student

Nationality: Indonesia

Department: Architecture and Civil Engineering

Period: March 2022 – June 2022

What motivated you to study at TUT?

The sophistication of technology in Japan motivates me to study it more deeply, and I hope to contribute to development in my own country.

What kind of studies and research did you do at TUT? How much progress?

I do my research for my thesis. It is heavy metal analysis. I compared the heavy metal analysis of my country's and Japan's methods. The sample is from the electrokinetic remediation research that I have done in my own country

Fun memories at TUT

I met lots of great people there, gaining new experience and knowledge, and can explore and improve various languages, especially English

Message to future visiting students

It would be better if you could adapt to the natural environment at Toyohashi University of Technology
